PROJECTS

ACADEMIC PROJECT : FORM VALIDATION

TECHNOLOGIES USED : – HTML, CSS, JAVASCRIPT, PHP

The project is developed to create a web application that validates user input in a form using HTML,CSS, and JAVASCRIPT. The form will collect basic information such as name and email, password and it will ensure that the user provides valid input before submission.

PERSONAL PROJECT : PORTFOLIO PERSONAL DETAILS MANAGEMENT SYSTEM (THREE WEEKS)

TECHNOLOGIES USED :

FORNTEND : HTML, CSS, JAVASCRIPT

The Personal Details Management System is a secure and user-friendly web application designed to help individuals organize and manage their personal information effectively. In today's digital age, where personal details are scattered across various platforms and documents, having a centralized system to store and access this information securely is crucial. This project aims to provide users with a convenient platform to store, update, and retrieve personal details such as contact information, identification documents, important dates, and more.
